

Vetenskapliga publikationer

Klinikens medicinska litterära produktion omfattar nära 2500 nummer. Dessa har i förteckningen grupperats årsvis för att man på så sätt skall få en uppfattning om den vetenskapliga tyngdpunkten under olika perioder.

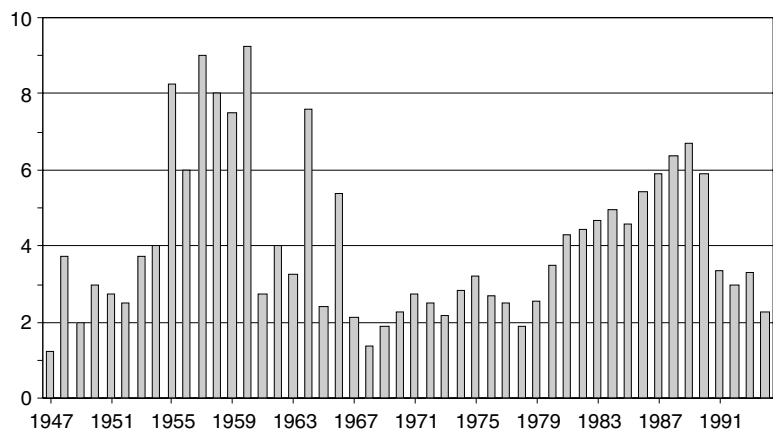

Som källor till förteckningen har för åren 1947–1971 använts de samlingar som Bertel von Bonsdorff gav ut i bokform. För tiden efter 1971 har använts de rapporter som kliniken årligen avgav om sin vetenskapliga produktion till universitetet och HUCS. Dessa rapporter baserar sig på författarnas egna uppgifter. Principerna för rapportering varierar något genom åren. Speciellt under de senare åren har abstrakt och kongressreferat tagits med i större utsträckning än tidigare, vilket innebär att statistiken för antalet publikationer inte är helt exakt. Den bör ändå ge en uppfattning om den vetenskapliga aktiviteten.

Diagrammen illustrerar antalet publikationer och doktorsavhandlingar per år, antalet publikationer per anställd läkare i medeltal per år, och antalet forskare per publikation i medeltal per år. Antalet publikationer stiger kontinuerligt och avspeglar den vetenskapliga aktiviteten på Kliniken som helhet. År 1965 är en vattendelare, emedan flyttningen till Unionsgatan medförde en ökning av potentiella forskare från fem till cirka 20. Den vetenskapliga aktiviteten fortsatte dock att öka inte bara absolut, utan också per person. Den speciellt höga aktiviteten per anställd läkare i början av klinikens historia beror delvis på att vetenskapliga arbeten, t.o.m. doktorsavhandlingar, inte sällan gavs ut av personer som inte (ännu) var formellt knutna till kliniken,

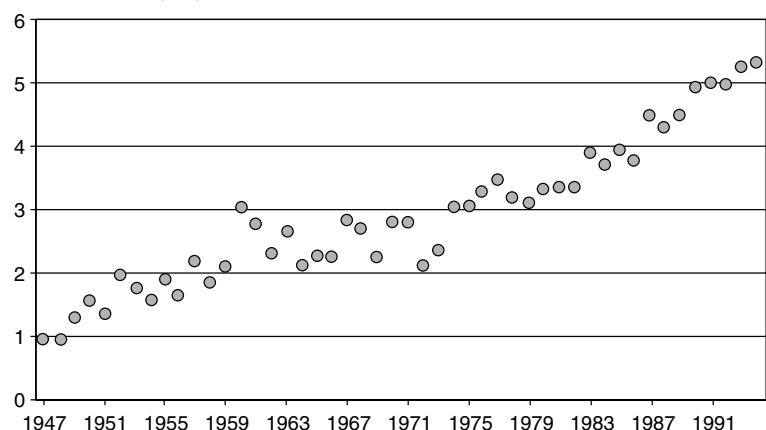

Publikationer per år. Siffrorna ovanför kolumnerna anger antalet doktorsavhandlingar

Antalet publikationer per anställd läkare och år

Antalet forskare per publikation

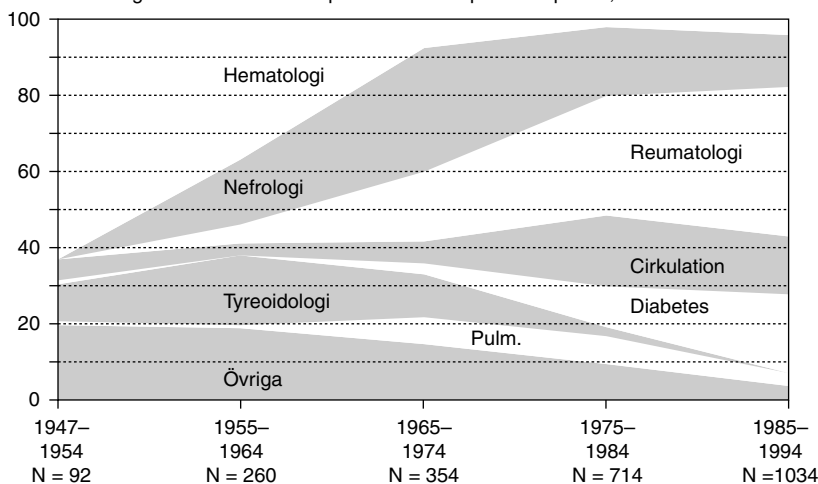

men dock arbetade under Klinikens auspicier och därför publicerade i Klinikens namn. Den sjunkande aktiviteten i slutet av Klinikens tillvaro kan möjligen ge anledning till spekulationer om i vilken mån den osäkra framtiden för Kliniken kanske medförde att man övergick till andra forskningscentra.

Utvecklingen av antalet författare per publikation illustrerar hur den medicinska forskningen under åren förändrades. I början arbetade man ofta ensam med ett projekt. Forskargrupper bildades då man upptäckte nya metoder som inte alla kunde behärska, liksom också som följd av samarbete över specialiteterna och mellan teoretiker och kliniker.

Valet av ämnen för forskningen genom åren avspeglar Klinikens intressen. Man ser hur de tre prefekterna präglar forskningens huvudfåra, men också hur nytillskott bland Klinikens forskare medför att nya vetenskapsgrenar växer fram och utvecklas.

Den medicinska vetenskapens internationalisering visas av urvalet tidskrifter i vilka arbetena publicerades. På 1950- och 1960-talen var andelen nordiska och inhemska tidskrifter cirka 75 pro-

Olika forskningsområdens andel av publikationerna per tioårsperiod, %

cent och internationella journaler cirka 25 procent, medan efter 1975 andelen publikationer i internationella tidskrifter hade stigit till 85 procent av hela antalet.

Referenserna har den form som använts i rapporterna. Tidskrifternas namn har såvitt möjligt ändrats enligt Index medicus form, och Vancouversystemet har då så varit möjligt använts för år, volym och sida. Slutsidan har angetts då den förekommer i rapporten. Kontroll av volym och sida mot originalpublikationerna har inte varit praktiskt möjligt.
